BrakeTurbinest fit almost all
16.5" hub or stud piloted
drums with 11.25" drums.

BrakeTurbinestSP

From their position on the inside of a drum brake, BrakeTurbinest form a stainless steel turbine that blows a cooling, cleaning stream of air in between the drum and friction material. This air stream lowers the surface temperature of the drum and friction material by as much as 28%. What are the benefits to cooler, cleaner brakes?

Cooler, cleaner brakes...

- Cooler, cleaner brakes last longer. BrakeTurbinest have been shown to increase brake life by 50% to 150% in line haul applications and 10% to 50% in the waste industry.
- Cooler brake help prevent drums from becoming heat checked, increasing the usable life of a drum.
- Cooler brakes are safer brakes, reducing the danger of brake fade. In dyno testing of extreme braking conditions BrakeTurbinest increased brake torque by as much as 18%.
- Cooler brakes help ensure that all your wheel end components last as long as possible. A common reason for costly wheel seal and bearing failures is excessive heat.
- Cooler, cleaner brakes reduce two of the primary factor in annoying brake squeal.

We make your brakes better.
