Fits most 12.25" drums.

Why BrakeTURBINES for 12.25" Drums?

The trucking industry has known for years that the benefits of 12.25" drums come at the price of severe brake wear that can often affect tires, seals and bearings. Because of this Lynnfin has adapted the patented cooling and cleaning technology in BrakeTURBINES to improve brake life and performance of 12.25" drums. BrakeTURBINES provide:

Longer Brake Life - BrakeTURBINES have been shown to increase brake life in trailers from 30% - 100% with most users seeing a 50% or greater increase.

Fight brake fade - FMVSS-121 testing shows that BrakeTURBINES give up to 20% more stopping power in fade conditions.

Replace backing plates - BrakeTURBINES keep the brakes clean without retaining heat or interfering with PM like a backing plate can.

Keep brakes dry - By expelling water from the drum, BrakeTURBINES improve wet weather stopping and reduce the factors that cause rust jacking.

Reduce heat checking - Cooler drums means that there are fewer incidents of heat checking in drums.

Reduce premature seal and bearing failure - High heat can damage seals and bearing, BrakeTURBINES reduce the heat.

We make your brakes better
